

Creating a PPPoE Dialer On Linux

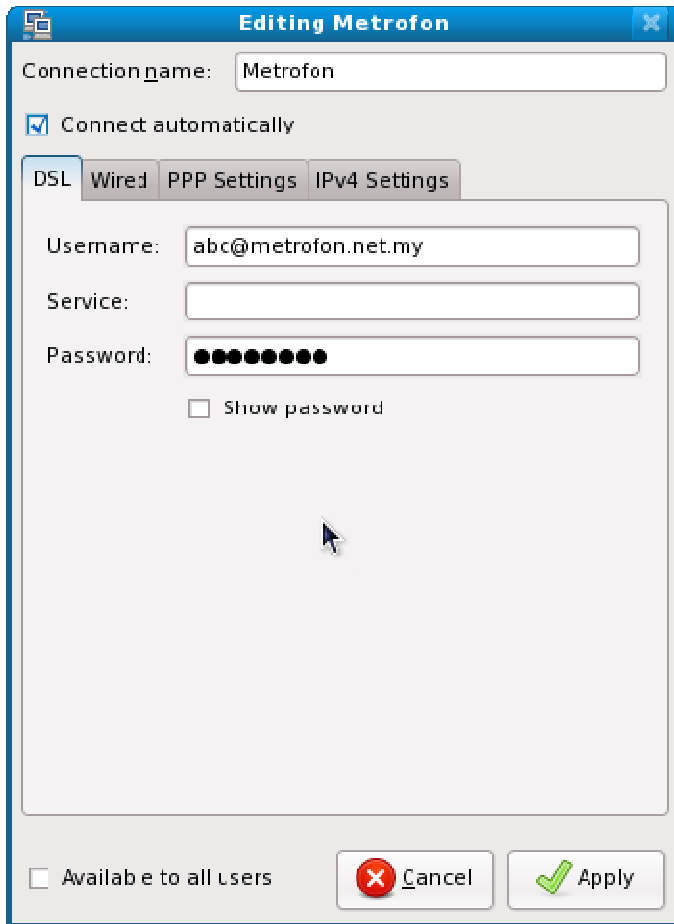

1. Go to “System” → “Preferences” → “Network Connections”

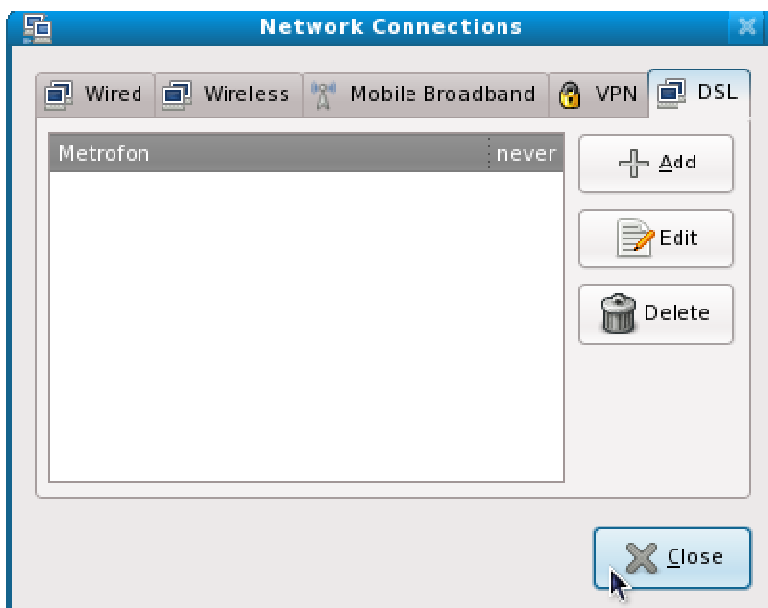

2. Go to “DSL” tab and Click “Add”

3. On **“DSL” tab**, Change the **“DSL Connection 1”** to **“Metrofon”**, then key in the **Username and Password**. You can also tick the **“Connect automatically”** if you need internet to be dialled automatically everytime you start your computer. Finally, click **“Apply”**.

4. Close the **“Network Connections”** window.

5. To establish PPPoE connection, click the **network logo** beside the time, select **“Metrofon”**
